### **CT PULMONARY ANGIOGRAPHY:**

#### **TECHNIQUE:**

CT study was done on Siemens Dual Source CT, SOMATOM DRIVE machine using the standard C.T. protocol with high luminal contrast enhancement (using 15c.c. non-ionic 350mg / 1.1ml).

#### **FINDINGS:**

The study reveals:

- Situs solitus; levocardia.
- Atrio-ventricular concordance.
- Double outlet RV is seen with aorta positioned anterior and slightly to the right of pulmonary artery. A peri-membranous type subpulmonic VSD is seen.
- Severe valvular and subvalvular pulmonary stenosis.
- Cardiomegaly with dilated RA and RV wall hypertrophy. Juxtaposed right atrial appendage.
- Right sided aortic arch and dual SVC.

#### **Cardiac chambers:**

- Situs solitus; levocardia.
- D-loop configuration of ventricles is noted; morphological right ventricle is located on right side and morphological left ventricle is noted on left side.
- Atrio-ventricular concordance.
- Double outlet right ventricle noted with L-malposition of the aorta. The aorta lies anteriorly and slightly to the right of the pulmonary artery.
- There is evidence of mild hypertrophy of RV wall, maximum measuring 5.4mm.
- Right atrium is dilated.
- A sizable subpulmonic VSD is seen. The VSD is non-routable to the aorta.
- No pericardial effusion is seen.

#### **Pulmonary arteries:**

- There is marked subvalvular pulmonary stenosis. Pulmonary artery at the level of the annulus measures approx. 3.0mm.
- Pulmonary valve is tricuspid.
- Short course of the MPA noted.
- Confluent branch pulmonary arteries are noted with stenosis at the origin of LPA. The RPA is good sized. The LPA is slightly small in size.
